1. Project Overview

1.1 Introduction

Agriculture is a vital part of India's economy and supports the livelihood of a large population. However, farmers face several challenges such as unpredictable weather, soil quality issues, and lack of proper market information, which can affect crop productivity and income.

AgriVista is an AI-powered agricultural platform designed to assist farmers in making better decisions. It analyzes soil, weather, and crop-related data to provide useful recommendations. The system helps farmers improve productivity and adopt more efficient and data-driven farming practices.

2. Problem Statement

2.1 Problem Statement

Current agricultural practices mainly rely on traditional methods and separate tools, which often do not consider real-time factors such as weather changes, soil conditions, and crop-related issues. This can lead to poor crop selection and reduced productivity. To address this, the proposed AgriVista system provides an integrated AI-based platform that analyzes soil, climate, and crop data. It offers reliable recommendations along with market insights, helping farmers make more accurate and informed decisions to improve yield and efficiency.

3.Objectives and Motivation

3.1 Objectives

- To recommend best crops using soil, weather, and location data.
- To predict crop yield accurately before cultivation.
- To suggest suitable fertilizers based on NPK values.
- To provide complete farming guidance using Season Planner.
- To offer market price insights for better selling decisions.

3.2 Motivation

- To support farmers with technology-based smart decisions.
- To improve crop productivity and farmer income.
- To reduce losses caused by wrong crop and fertilizer use.
- To promote sustainable and data-driven agriculture.

4. Literature Review

Sr No.	Name of the System	Year	Summary	Gaps
1	Smart Agri AI System	2026	Used ML + IoT for crop and yield prediction with high accuracy.	Lacks explainability; depends on real-time sensors.
2	Intelligent Crop Recommendation	2025	Compared RF, SVM, ANN; RF achieved highest accuracy.	Works only on tabular data; no hybrid models.
3	Deep Learning Crop Prediction	2025	Used CNN models for crop prediction using soil and weather data.	Requires large dataset; high computation cost.
4	Soil-Based RF Model	2024	Used Random Forest on soil parameters (NPK, pH); accuracy.	Ignores weather factors; limited adaptability.

5. Methodology

5.1 Tools and Technologies

- **Dataset:** Kaggle & Government datasets (soil, weather, crop production data)
- **Algorithms:** Random Forest, Decision Tree
- **Development Tools:** Python, FastAPI, TensorFlow, Pandas, NumPy
- **Web Tech Stack:** MERN (MongoDB, Express, React, Node.js), React + Vite
- **Mobile Tech:** Flutter (Android/iOS)
- **API's :** Google Gemini, Groq, Open gov data API , Open Weather API

6. Algorithm

Algorithm 1: Crop Yield Prediction using Random Forest Regressor

Input: Soil Moisture (SM), Soil pH, Temperature (T), Rainfall (R), Humidity (H), Crop Duration (D)

Output: Predicted Crop Yield (Y)

1. Begin
2. Read input parameters: SM, pH, T, R, H, D
3. Validate input values.
4. Perform preprocessing: • Handle missing values • Normalize numerical features
5. Create feature vector $X = \{SM, pH, T, R, H, NDVI, D\}$
6. Load trained Random Forest Regressor model.
7. For each decision tree T_i in the forest do $Y_i \leftarrow T_i(X)$ End For
8. Compute final prediction: $Y = \text{Average}(Y_1, Y_2, \dots, Y_n)$
9. Display predicted crop yield Y.
10. End

Algorithm 2: Fertilizer Recommendation using Random Forest Classifier

Input: Nitrogen (N), Phosphorus (P), Potassium (K), Soil pH, Temperature (T), Rainfall (R)

Output: Recommended Fertilizer (F)

1. Begin
2. Read input parameters: N, P, K, pH, T, R
3. Validate and preprocess the input data.
4. Create feature vector $X = \{N, P, K, pH, T, R\}$
5. Load trained Random Forest Classifier model.
6. For each decision tree T_i in the forest do $F_i \leftarrow T_i(X)$ End For
7. Apply Majority Voting: $F = \text{Mode}(F_1, F_2, \dots, F_n)$
8. Display recommended fertilizer F.
9. End

7. Implemented Modules

Phase	Description
Module 1: Crop Recommendation	RF model using NPK, pH, rainfall → best crops
Module 2: Yield Prediction	Predict yield using environmental parameters
Module 3: Fertilizer Suggestion	Recommend fertilizers based on soil & crop
Module 4: Season Planner	AI-based crop planning & scheduling
Module 5: Market Trending Module	Real-time price & trend analysis

8. System Architecture

Best Practices for Kharif Crop Planning 2026

Hello fellow farmers,

I am planning for the upcoming Kharif season and would like some advice on crop selection and soil preparation. Last year, I cultivated soybean and faced issues with pest attacks and irregular rainfall.

Could experienced farmers suggest:

Suitable crops for medium black soil

Effective pest management techniques

Organic fertilizers for better yield

Water-saving irrigation methods

Government schemes available for farmers in 2026

Any suggestions and experiences would be greatly appreciated. Thank you!

Save Plan

✓ Suitability Verdict

Rahuri, Ahmednagar, Maharashtra has a suitable climate for sugar cane cultivation with average temperatures ranging from 20-30°C and annual rainfall of around 400-600 mm, which meets the crop's requirements. Go ahead

✂️

Land Preparation

✓ Deep ploughing (up to 30 cm depth) to loosen the soil and remove weeds, followed by levelling to ensure even water distribution.

✓ Application of 10-15 tonnes of well-rotted farmyard manure (FYM) per acre to improve soil fertility and structure.

💡 Expert Tip: Maintain soil pH between 6.5 and 7.5 for optimal sugar cane growth.

🌱 Seeds

- Co 86032 (200 kg)
- Co 91010 (200 kg)

🌿 Fertilizers

- DAP (125 kg/acre)
- MOP (60 kg/acre)
- Urea (150 kg/acre)

🚫 Pesticides

- Imidacloprid (for early shoot borer)
- Mancozeb (for leaf spot)

 Consultant: rice

 1. Why this crop?

Rice is suitable for these conditions due to its tolerance for moderate temperatures and high humidity, with the given nitrogen, phosphorus, and potassium levels providing a good foundation for growth. The pH level of 6.5 is also within the optimal range for rice cultivation.

 2. Monthly Schedule (15-Day Plan)

- Month 1 (Days 1-15): Prepare the soil by plowing and leveling, then apply basal fertilizers. Sow the rice seeds in a nursery.
- Month 1 (Days 16-30): Transplant the seedlings to the main field, maintaining a spacing of 20x20 cm. Apply irrigation to maintain soil moisture.
- Month 2 (Days 1-15): Apply top-dressing of nitrogenous fertilizers to promote tillering and panicle formation.
- Month 2 (Days 16-30): Continue irrigation and monitor for pests and diseases. Apply pesticides as necessary.
- Month 3 (Days 1-15): Apply potash fertilizers to promote grain filling and maturation.
- Month 3 (Days 16-30): Gradually reduce irrigation to facilitate drying of the grain. Prepare for harvesting.
- Month 4: Harvest the rice crop when the moisture content is around 20%. Dry the grains further to 12% moisture content for storage.

13. Mobile App UI

WHAT TO DO TODAY?

10. CONCLUSION

Conclusion:

AgriVista is an AI-ML based smart agriculture system that helps farmers select suitable crops, predict yield and get fertilizer recommendations using soil and climate data. The system successfully integrates machine learning with a user-friendly web and mobile interface, making advanced technology accessible for real-world farming decisions.

Future Work:

- Integration of **mobile app with backend APIs** for seamless real-time usage
- Improve model accuracy using **larger and real-time datasets**
- Implementation of **IoT sensors** for live soil and environmental monitoring
- Enhanced UI/UX for better usability for farmers

Subject: Sponsorship of Final Year Project-AgriVista: Smart Crop Planning and Advisory System using AI-ML

Respected Sir,

This is to certify that the following final-year students of Dr. Vithalrao Vikhe Patil College of Engineering are authorized to undertake the project titled “**AgriVista – Smart Crop Planning and Advisory System using AI-ML**” under our guidance and sponsorship. The project focuses on developing an AI-powered web platform that assists farmers in making informed agricultural decisions through intelligent crop planning and advisory services.

The system includes **Crop Prediction, Yield Prediction, Fertilizer Recommendations, Season Planning, Farmer Ledger Management, Market Trends and News Analysis, a Farmers Community Platform, and Chat & Voice Support** to help farmers improve productivity and make data-driven farming decisions.

Group Members:

- 1. Ms. Vaishnavi Arun Bankar – Roll No. 02
- 2. Ms. Siddhi Rajendra Pagire – Roll No. 23
- 3. Ms. Shravani Shriram Welzile – Roll No. 30

We are pleased to sponsor this project for the Academic Year 2025–26 by providing technical guidance, domain expertise, resources, and financial support. The project will be supervised by **Mr. Aditya Munot, Owner, Mahesh Krushi Seva Kendra, Vambori, Ahilyanagar**. We believe this initiative will promote innovation in smart agriculture and support farmers through technology-driven solutions.

Yours sincerely,

Mr. Aditya Munot
Owner, Mahesh Krushi Seva Kendra,
Vambori, Ahilyanagar.
