

AgriVista Season Guide

Comprehensive Farming Strategy

Date: 6/29/2026

Crop: Rice

Region: Pune, Maharashtra, Mulshi

Suitability Verdict

Mulshi, Pune, Maharashtra has a suitable climate for growing rice during the summer season, with average temperatures ranging from 20-35°C and average annual rainfall of around 1500 mm. However, the summer season may require additional irrigation.

Go ahead with the cultivation of rice, but ensure proper irrigation management.

Required Farm Inputs

Seeds:

- Jyoti (20 kg)
- Savitri (25 kg)

Fertilizers:

- Urea (120 kg/acre)
- DAP (60 kg/acre)
- MOP (30 kg/acre)

Protection:

- Buprofezin (Brown Plant Hopper)
- Tricyclazole (Leaf Blast)

Land Preparation

- Plough the field 2-3 times to loosen the soil and remove weeds, followed by leveling to ensure uniform water distribution.
- Apply 10-12 tons of well-decomposed farmyard manure (FYM) or compost to improve soil fertility and structure.

Key Tip: Maintain soil pH between 5.5 and 6.5 for optimal rice growth.

Seed Selection & Sowing

Variety	Details	Approx. Price
Jyoti	Medium-duration variety, suitable for summer season, with high yield potential and moderate disease resistance.	₹45/kg
Savitri	Long-duration variety, suitable for summer season, with high yield potential and good disease resistance.	₹50/kg

Seed Rate: 40-50 kg/acre

Spacing: 20 cm x 10 cm

Method: Sow seeds in a well-prepared nursery, followed by transplanting 15-20 days after sowing.

Treatment: Treat seeds with Azospirillum and Phosphobacterium (each 200 g/10 kg seeds) for improved nutrient uptake.

Nutrient Management (Fertilizer Schedule)

Stage	Fertilizer	Dose	Est. Cost
Basal Application	DAP (60 kg/acre) + MOP (30 kg/acre)	60 kg + 30 kg	₹4500
Vegetative Growth (20-25 DAS)	Urea	80 kg	₹380

Water Management

Irrigate the field 2-3 days after transplanting, followed by life irrigation at 5-7 days interval. Critical stages for irrigation are crown root initiation, flowering, and grain filling.

Critical Stages: Crown Root Initiation, Flowering, Grain Filling

Plant Protection

Major Pests:

Major Diseases:

- Brown Plant Hopper
 - Control measure: Apply insecticide (Buprofezin 25% SC) @ 250 ml/acre
- Leaf Blast
 - Control measure: Apply fungicide (Tricyclazole 75% WP) @ 500 g/acre

Harvest & Post-Harvest

Signs of Maturity: Grains turn golden yellow, Moisture content check: 20-22%

Harvesting Method: Manual harvesting, followed by drying and threshing.

Storage Advice: Store grains in a cool, dry place with 10-12% moisture content, away from direct sunlight.

Economic Estimates

Est. Cultivation Cost: ₹75,000 per acre

Est. Yield / Acre: 50-60 quintals/acre

Market Outlook: The market demand for rice is high in Maharashtra, with an average price of ₹25,000-30,000 per quintal.
